

DOSING CONTROL VALVES

Accurately doses reagents into the flotation process

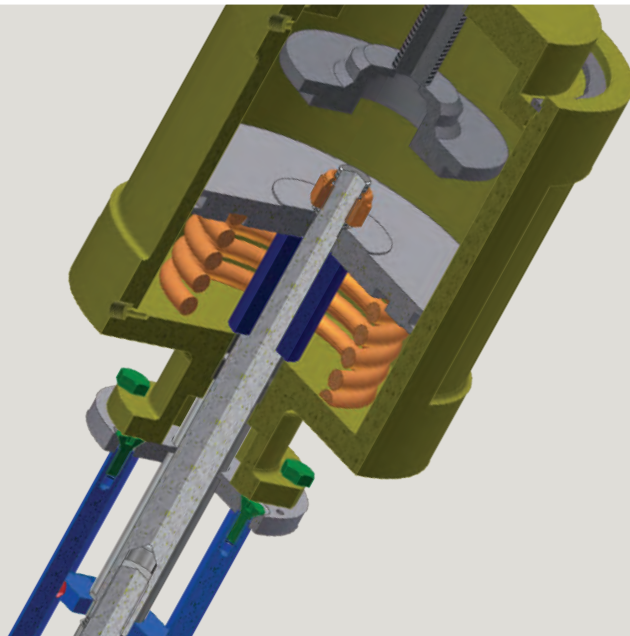

ABOUT DOSING CONTROL VALVES

Mitech's locally designed and manufactured Dosing Control Valves are especially designed for each application and are ideally suited for use in ring main dosing systems. The valves monitor the process, reduce reagent costs and eliminate human error. The Dosing Control Valves continuously monitor the dosing state with a 15 minute feedback. The medium is continuously circulated reducing clogging, spillage and crystallisation.

SUMMARY OF KEY FEATURES AND BENEFITS

Model	Key features	Key benefits
DOSING CONTROL VALVES	Erosion resistant	Long life span
	Anti clogging design	Improved performance
	Trim sized to suit process data	Versatile
	Valve rated for 600 kPA	Versatile
	Outlet port to suit trim size	User-friendly
	Nylon coated cylinder	Robust
	On/off or modulating	Versatile
	Double acting or spring return	Versatile
	Local manufacture	Quick deliveries - special designs

INDUSTRIES AND APPLICATIONS

- Process Control
- Chemical
- Food
- Brewing
- Water

MITECH CONTROL VALVES (PTY) LTD
